## PACE Pharmacy News & Updates

[Visit Our Website](#)

### ScriptTalk for the Visually Impaired

CareKinesis now offers **ScriptTalk** solutions for participants. The ScriptTalk Station is a portable electronic device that helps patients with blindness, visual impairments, and other print impairments manage their own medications conveniently and effectively. This device uses text-to-speech technology that links to special prescription labels.

### EireneRx Database gets a Makeover

FIPS is a national technology security standard that guarantees a high degree of security, assurance, and dependability. Federal agencies use FIPS-validated technology, and now, so do CareKinesis clients. While EireneRx has long been redundant and fault-tolerant, now it is also certifiably secure. And, in the process of upgrading our systems, we've increased the operational efficiency of EireneRx as well.

[Read more about FIPS here.](#)

### CMS issues PACE Request for Information (by 2/10)

CMS is seeking feedback on (1) a proposal for a five-year PACE-like model test for dual-eligibles age 21 and older who require nursing-home level care and meet other eligibility criteria and (2) additional populations who could benefit from PACE-like models *and* how the PACE model can be adapted to better serve these populations as well as the currently eligible population. We encourage you, who are most knowledgeable about PACE, to join the conversation! Comment deadline is 5pm EST, February 10, 2017.

[Read the full CMS Request here.](#)

### EireneRx EHR Integrations

We have established technology integrations with Cognify/Greenway, RTZ Associates/PACECare, NextGen, Mediture/TruChart, and others to enhance the CareKinesis Pharmacy experience for our clients. EMR integrations enable medication information to securely flow between systems in real time, resulting in improved accuracy, time savings, efficiency, and improved medication risk management and related outcomes.
